Increasing Quality Through PHAB Accreditation

Accreditation measures a health department’s performance against a set of nationally recognized, practice-focused, and evidence-based standards. Through accreditation of health departments, PHAB fosters continuous quality improvement to help accredited health departments deliver essential public health services to their communities. Health departments that sustain accreditation over time report a wide range of benefits from accreditation, including:

- **89%** saw increased accountability and transparency within their health department.
- **78%** strengthened relationships with key partners in other sectors (e.g., health care, social services, education).
- **89%** improved their ability to identify and address gaps in employee training and workforce development.
- **More than 80%** indicated that overall, accreditation has helped their response to the COVID-19 pandemic.

"Since being accredited, our health department has strengthened... partnerships with our community to address **health equity** and improve the overall wellness of people [in our community]."
This was very valuable time to reflect on not only what we are doing, but how we are doing it. **Reaccreditation challenged us to not rest on our laurels but to continually evaluate and improve upon our work.**

PHAB is the sole national public health accrediting body for state, local, territorial, Army and Tribal health departments. **Through the accreditation process, we promote consistency in the delivery of public health services across health departments by strengthening health department infrastructure.**
